EXP 13: PING PROGRAM

AIM:

To implement your ping program.

CODE:

```
import os
import platform
import subprocess
def ping (host = "google.com", count = 4):
    param = "-n" if platform.system().lower() ==
        "windows" else "-c"
    command = ["ping", param, str(count), host]
    try:
        output = subprocess.check_output(
            command,
            universal_newlines = True
        )
        print(output)
    except Exception as e:
        print(f"Ping failed: {e}")
if __name__ == "__main__":
    ping ("8.8.8.8")
```

OUTPUT:

python practical 13 - ping.py

Pinging 8.8.8.8 with 32 bytes of data

Reply from 8.8.8.8 bytes = 32 time = 72ms

Reply from 8.8.8.8 bytes = 32 time = 50ms

Reply from 8.8.8.8 bytes = 32 time = 70ms

Reply from 8.8.8.8 bytes = 32 time = 91ms

Ping statistics for 8.8.8.8

Packets : sent = 4, received = 4, lost = 0 (0%

Approximately round trip times in milli-second

minimum = 50ms, maximum = 72ms, average = 6

RESULT:

Thus ping program is implemented successfully.
